

Claims Appendix: Claims On Appeal

A 1. (previously presented) A method for the biological production of polyhydroxyalkanoate containing 3-hydroxyhexanoate comprising providing genetically engineered bacteria expressing a phbA thiolase gene encoding an enzyme that converts butyryl-CoA and acetyl CoA to beta-ketohexanoyl-CoA, a phbB reductase gene that encodes an enzyme that converts beta-ketohexanoyl-CoA to beta-hydroxyhexanoyl-CoA, and a phbC polymerase gene that encodes an enzyme that polymerizes 3-hydroxybutyryl CoA and 3-hydroxyhexanoyl-CoA, wherein the enzymes are expressed in a sufficient amount to produce polyhydroxybutyrate-co-polyhydroxyhexanoate.

Claims 2-5 (Canceled).

O 6. (previously presented) The method of claim 1 wherein the phbC polymerase gene is incorporated into the bacterial chromosome. ~~as described in the prior art~~

O 7. (previously presented) The method of claim 1 for producing a copolymer of polyhydroxyhexanoate comprising providing a phbC polymerase gene from a bacteria selected from the group consisting of *Aeromonas caviae*, *Comamonas testosteroni*, *Thiocapsia pfenigii*, *Chromatium vinosum*, *Bacillus cereus*, *Nocardia carolina*, *Nocardia salmonicolor*, *Rhodococcus ruber*, *Rhodococcus rhodocrous*, and *Rhodospirillum rubrum*.

Claims 8 and 9 (Canceled).

Pha 10. (previously presented) The method of claim 1 wherein the bacteria further comprises a gene encoding β -hydroxyacyl-ACP-coenzyme A transferase.

Claims 11-13 (Canceled).

see 10/703,906 CN
11/053,551

0 14. (previously presented) The method of claim 1 wherein the bacteria is *E. coli*.

A 15. (previously presented) The method of claim 7 further comprising providing a gene encoding a polymerase from a bacterium selected from the group consisting of *R. eutropha*, *Alcaligenes eutrophus*, *Klebsiella aerogenes*, and *P. putida*.

5845 0 16. (previously presented) The method of claim 1 wherein the bacteria expresses a gene encoding a D-specific enoyl-CoA hydratase.

col. 1 0 17. (previously presented) The method of claim 1 wherein the bacteria expresses a PHB biosynthetic thiolase, three enzymes from *C. acetobutylicum* that form butyryl CoA, thiolase specific for 3-ketohexanoyl CoA, reductase specific for 3-ketohexanoyl CoA, and PHB polymerase that accepts both 3-hydroxybutyryl CoA and 3-hydroxyhexanoyl CoA.

A 18. (previously presented) The method of claim 1 wherein the bacteria expresses one or more fatty acid biosynthetic enzymes.

A 19. (previously presented) The method of claim 18 wherein the fatty acid biosynthetic enzymes convert acyl ACP to acyl CoA.

A 20. (original) The method of claim 19 where the enzymes are selected from the group consisting of ACP-CoA transacylase, acyl ACP thioesterase, and acyl CoA synthase.

Fig 20 21. (original) The method of claim 20 wherein the enzymes are acyl ACP thioesterase and acyl CoA synthase.

Claims 22- 34 (canceled).
